Project Management Cameos - 8. Agility of not being agile

Agility   *a way to change*
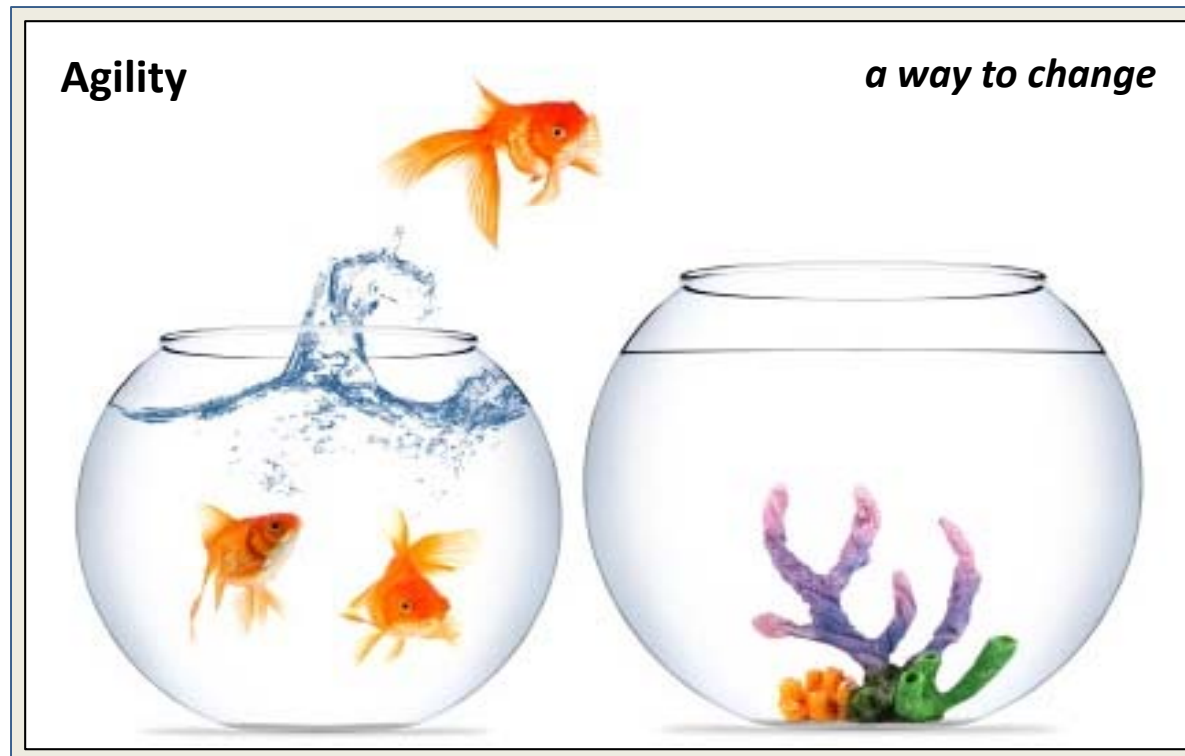

Agile

Agility is a way to change, whereas agile is a way to be. When water conditions and other fishes are unsatisfactory, agility means looks for a more fitting habitat, taking the risk to jump into it. Which kind of fish (project) are we speaking about?

Agility (also referred as OA – Organizational Agility) is the capability to quickly sense and adapt to external and internal changes to deliver results in a productive and cost-effective manner (Reference: PMI – Pulse of the profession "Achieving greater agility", 2017). Agility is a balance – not a battle – of choices on condition that, including a switch from agile to waterfall, if needed. Agility is a mix of order and chaos, that's to say "chaordic", all-in-one!
